

COVID19 and Esophageal Atresia Survey

Dear INoEA members, Dear Friends.

We hope everyone is well.

Due to the SARS-CoV-2 pandemic, even though we, so far, have no worries in the current literature for children and in EA patients, we would like to ask all members of the INoEA to participate to a survey.

We would like to record all patients with esophageal atresia who have been infected with SARS-CoV-2 by filling out the following survey (new version) <https://fr.surveymonkey.com/r/COVID-19andEA>

This study has been authorized by the Ethic Committee of the CHU Sainte-Justine, Université de Montréal, Canada (#2020-2877).

If you are a patient or a parent we ask you to contact your health provider to fill the survey to protect your privacy. The survey is anonymous.

The objective of this survey is to collect cases of COVID19 in children with esophageal atresia in order to:

- 1- Describe their evolution
- 2- Describe the risk factors for evolution
- 3- Report the data collected to members of the network and, if necessary, develop recommendations for this population

For further information, feel free to contact us at board@inoea.org

We will keep updated everyone with the collected information.

Thank you and

Take care and wash your hands.
